UNIQUE LOCKING SYSTEM FOR REINFORCED STRENGTH

H-BUCKET

The SoRoTo H-Bucket is back by popular demand. There's no better time than now for reintroducing a product that **emphasizes sustainability and longevity** to our *Hard Working* users all over the world.

Here's why our customers think our H-Bucket is better than others on the market.

55

USING THE H-BUCKET

The H-Bucket has a volume of 55 liters and a minimum capacity of 150 kilograms. Like regular buckets, the H-Buckets can be stacked, but their defining feature is that the buckets can be **coupled and locked together**.

Our buckets has the lowest bottom on the market. So when a mason starts tiling the bottom of a wall, he'll only need one bucket. With an edge of the bucket at 29 cm, it's easy for the mason to reach the content of the bucket. But as the mason progresses up the wall, he can add another bucket below and lock them together, **positioning the buckets at the perfect height** (56 cm) for easy use.

The H-Buckets are **stackable!** They require a minimum amount of space and fit perfectly in a panel van.

 SUSTAINABLE WITH LONGEVITY IN MIND 

EFFORTLESS CLEANING WITH H-BUCKETS

Cleaning H-Buckets has never been easier! The unique material used in the construction of these buckets allows for easy removal of mortar residue or dirt.

After completing your task, simply use a water hose to rinse off the H-Buckets and they will be sparkling clean in no time. The locking mechanism of each bucket is **thoughtfully designed** with space to take in dirt when the buckets are locked together, so don't forget to clean the bottom of the buckets too.

H-Buckets are the ideal solution for those seeking a hassle-free and efficient cleaning process. With their simple design and **durable material**, cleaning up after any task becomes a breeze. So, save your energy and time with H-Buckets and enjoy an effortless cleaning experience.

THE H-BUCKET BRICK PLATE

As an additional item, the SoRoTo brick plate is designed to work as a **loading bench** with the H-Buckets. The brick plate is mounted between 2x2 locked H-Buckets and can lift the bricks to an ergonomic height. The brick plate is also used as a workbench, so additional tools can be put on the bench. The brick plate has three adjustments for distance, ensuring that your **preferred working distance** between the H-Buckets are possible.

THE SOROTO LOCKING SYSTEM

Locking the buckets in place **reinforces their strength**, so they can withstand heavy weight! The H-Bucket contains 55 liters. The locking system ensures that loading newly mixed concrete (from a SoRoTo Forced Action mixer off course) from a **wheelbarrow** is not a problem, as the H-Buckets won't topple over, wasting material and causing a mess.

THE H-BUCKET IS ERGONOMICALLY DESIGNED

Masons need to be careful of the toll that working on a construction site day in, day out takes on their bodies. Over a long period of time, repeated stress on your back, arms, or legs can **lead to injuries**. That's why it's so important to ensure all of your tools and equipment are optimised for good ergonomics.

Masons' health is our priority, so like our other products, our H-Buckets are **ergonomically designed**. The ergonomic handles fit comfortably in your hand and make the bucket easy to carry, while the ability to couple and lock buckets for the ideal height means there is no risk of back strain, so you can work safely.

MADE WORKING SINCE 1986

DID YOU KNOW...

The advantage of the **H-BUCKET** is that the mason starts working with the bucket placed on the ground. This is convenient when laying the lower bricks.

As the mason works his way further up, one H-Bucket can be placed on top of another bucket turned upside down. Lock the upper bucket together with the lower bucket with a twist. Thereby the bucket with mortar is placed in an **optimal working height** without use of any kind of racks.

When the day's work is finished, the H-buckets can be stacked like traditional Masonry tubs, and thereby taking up very little space.

HARD FACT:

Since the buckets have the same width at the bottom and top, you can rest one full wheelbarrow on the edge, without the bucket tipping!

FACT CHECK:

| | |
|----------------------|--|
| Volume | 55L |
| Height single | 29 cm |
| Total height | 56 cm |
| Bottom raised | 32 cm |
| Load | Form-resistant / frost-resistant up to - 20° |
| Edge | 4 ergonomic carrying handles |
| Material | Frost-resistant |
| Weight | 1 pc. = 2,44 kg |
| Diameter | 62 cm |
| Transport | Can be stacked |
| Packaging | pcs / 14 pcs / 28 pcs |

H-BUCKET

DID YOU KNOW...

The strong **BRICK PLATE** in aluminium, placed between H-buckets, ensures that the bricks are placed in a perfect **ergonomic working height**.

Each Brick Plate features six cut-outs, providing ample room for storing a mason's tools. With masonry tools such as chisels, trowels or hammers kept close to hand, a bricklayer's job is made easier and more efficient.

HARD FACT:

There is a possibility of 3 adjustments of the distance between H-buckets.

FACT CHECK:

| | |
|------------------|--------------------------------|
| Load | 150 kg - may not be stepped on |
| Weight | 3,25 kg |
| Height | 5 cm |
| Width | 46 cm |
| Length | 95 cm |
| Load | Hammer blow & 150 kg |
| Material | Floor plate alu. |
| IMPORTANT | May not be used as scaffolding |

BRICK PLATE

STRONGER. LA

LASTS LONGER.

OUR H-BUCKETS ARE SUSTAINABLE

Many of the products we use day to day are designed to be disposable, only good for one or two uses. To counter this mindset, which is highly damaging to the environment, our H-Buckets are **designed with longevity in mind**. Because of its high quality design and material, a bucket can last for many years, reducing waste.

In our discussions with masons over the years, we've discovered that many go through a substantial number of buckets per year. By switching to SoRoTo's **long-lasting H-Buckets**, you'll need far fewer - which will have less of an impact on the planet, as well as saving you money.
